ASSOCIATION OF AEROSPACE INDUSTRIES (SINGAPORE)

MR WONG YUE JEEN

President
**Association of Aerospace
Industries (Singapore)**

By 2035, the global space economy is projected to reach US\$1.8 trillion, tripling its size from 2023, according to a 2024 report by the World Economic Forum. With an average annual growth of 9%, this expansion is fuelled by rising demand for satellite technology, telecommunications, navigation and other critical applications. The opportunities are vast, creating new frontiers for innovation and collaboration.

While not a traditional spacefaring nation, Singapore is strategically carving its niche as a key player in this rapidly expanding sector. Since 2011, the country has successfully launched over 30 satellites, leveraging its strengths in advanced manufacturing, aerospace, electronics, as well as research and development to produce high-technology small satellites and components. In 2025, Singapore will launch the Extremely Low Earth Imaging Technology Explorer (Elite), developed by Nanyang Technological University. Operating at just 250km above Earth, Elite will venture into the challenging environment of very low Earth orbit, marking a milestone in Singapore's journey to strengthen its presence in the space domain.

Singapore's commitment to space industry development is bolstered by strong support from the government, including investments in space technology research and the establishment of the Office for Space Technology and Industry (OSTIn) as the national space office. To complement such efforts and to enhance the vibrancy of the ecosystem, the Association of Aerospace Industries (Singapore) (AAIS) has launched the Singapore Space Community. This platform connects traditional aerospace companies, space industry players and start-ups, as well as government agencies to exchange ideas, explore collaboration and contribute towards shaping the sector. AAIS is also uniquely positioned to facilitate aviation-related applications of space technologies such as satellite data, advanced communication systems and Earth observation tools to enhance key areas such as air traffic management, airport operations and flight optimisation.

This inaugural edition of the Singapore Space Industry Directory is yet another initiative to shine a spotlight on this exciting sector. It serves as a valuable resource for industry players, showcasing Singapore's capabilities and the opportunities within the space domain and beyond.

With strong expertise in areas including hardware and engineering, software and systems, materials and additive manufacturing, telecommunications and navigation, Singapore-based companies offer a variety of products and services to deliver innovative solutions to meet the evolving demands of the space industry. We invite you to explore this directory and discover how these capabilities can elevate your space programmes.

OFFICE FOR SPACE TECHNOLOGY & INDUSTRY, SINGAPORE (OSTIn)

MR JONATHAN HUNG

Executive Director
Office for Space Technology & Industry, Singapore (OSTIn)

Space technologies have the potential to address national needs and global challenges in domains as diverse as aviation & maritime connectivity, food security, and the green economy. The burgeoning local space sector is a strategic enabler of these efforts in Singapore and our region. With about 70 companies and around 2,000 professionals and researchers, Singapore aspires to be a hub for satellite manufacturing, connectivity, and earth observation services.

The Office for Space Technology & Industry (OSTIn), Singapore's national space office, is central to this growth. Since 2013, OSTIn fostered a competitive ecosystem for space activities, nurturing local technology capabilities and developing conducive space policies. Our national guidelines on space safety, sustainability and registration ensure Singapore's continued relevance in the global space community.

OSTIn focuses on several key areas to build up Singapore's space capabilities and industry. A primary focus is leveraging Singapore's Near-Equatorial remote sensing satellites, along with our expertise in Artificial Intelligence and data analytics. This approach enables us to address sustainability challenges and develop high-quality and cost-effective digital tools for environmental monitoring. Additionally, OSTIn is focused on research and development of disruptive and niche technologies like Quantum Key Distribution (QKD) solutions, to stay ahead of the technological curve.

Supporting these initiatives is the Space Technology Development Programme (STDP), with an initial fund of S\$150 million to strengthen our R&D of space technologies. This funding is crucial at advancing projects aligned with national priorities across key sectors like aviation and maritime.

Singapore's commitment to international cooperation and the responsible use of space by all is evident through its participation in the United Nations Committee on the Peaceful Uses of Outer Space (COPUOS), regional platforms such as the Asia-Pacific Regional Space Agency Forum (APRSAP) and strong bilateral relationships forged. These partnerships facilitate knowledge exchange and collaborative projects that benefit multiple stakeholders.

Our focus on research, innovation and technopreneurship offers multiple collaborative avenues to explore new opportunities. All of which we welcome international partners to advance our collective goals within Singapore's space sector.

I look forward to working closely with all of you as we reach for the stars.

Office for Space Technology & Industry, Singapore

THE CIVIL AVIATION AUTHORITY OF SINGAPORE

MR NG TEE CHIOU

2 Deputy Director-General
Civil Aviation Authority of Singapore

Since the 90s, the Civil Aviation Authority of Singapore (CAAS) has adopted satellite technologies in the provision of air navigation services, complementing the deployment of ‘legacy’ communications, navigation and surveillance (CNS) systems which have coverage limitations. These modern systems include Satellite Voice Communications (SATCOM); Controller-Pilot Data Link Communication (CPDLC); Performance Based Navigation including Area Navigation (RNAV) routes and Required Navigation Performance (RNP) instrument approaches; and Space-based Automatic Dependent Surveillance – Broadcast (ADS-B). They improve the reliability of communications with pilots, provide precise position information of aircraft, and enhance the air situation picture for air traffic controllers.

In the near future, it is envisaged that satellite technologies with their global coverage would play an even bigger role in air navigation services. Future concepts of operations, in particular Trajectory Based Operations (TBO) and free route airspace would be enabled by satellite technologies.

A noteworthy upcoming technology is the development of Space-based Very High Frequency (VHF) Communications that provide high-quality controller-pilot voice communications in areas without VHF voice communications, such as over the high seas, thus vastly improving air traffic management. CAAS has embarked on a research and development project and will collaborate with local and international partners on a proof-of-concept to trial this technology, as well as work with the International Civil Aviation Organization (ICAO) on technical requirements.

Space technology has the potential to revolutionise aviation, improving safety, efficiency, and sustainability while expanding capacity to handle the growing demand for air travel. CAAS is optimistic about the growth of Singapore’s space technology sector and its contribution to aviation.

**MR SOH LENG WAN**

*Assistant Managing Director
(Manufacturing)*
Enterprise Singapore

We are at an exciting juncture in the development of Singapore's space tech sector. Over the past decade, our local ecosystem has rapidly matured, fuelled by the determination and innovation of our space tech companies and supported by robust industry collaborations. The launch of this Singapore Space Tech Directory by the Association of Aerospace Industries (Singapore) represents a critical step forward in showcasing Singapore's capabilities to the global space community.

The applications of space technology today go far beyond space exploration; they are crucial for addressing pressing terrestrial challenges, such as monitoring climate change, supporting disaster management and enabling advanced communications for the maritime and aviation sectors. By leveraging satellite connectivity, these sectors gain access to real-time, high-precision data and communication links that improve safety, navigation, and operational efficiency across global routes.

Singapore is well-positioned to play a significant role in the burgeoning field of space tech, with our companies developing advanced solutions in satellite hardware, satellite communications, quantum encryption, and Earth observation. Our space tech ecosystem is supported by a rich network of research institutions, government support, and a dynamic mix of innovative startups, growing SMEs, and leading international corporations. A recent success story is Addvalue Innovation, whose Inter-Satellite Data Relay System (IDRS) was selected by the U.S.-based space company Vast for deployment on its upcoming Haven-1 space station. Addvalue's IDRS enables continuous, reliable data relay between Earth and space, facilitating real-time communications crucial for space operations. This partnership will see Singaporean innovation at the core of future space station operations, reinforcing Singapore's role in space communications and connectivity.

Enterprise Singapore is committed to nurturing this vibrant sector by fostering partnerships, facilitating access to international markets, and supporting tech development initiatives. We are proud to partner with AAIS in this effort, which aligns with our vision of creating a globally connected space hub. We look forward to seeing Singapore's space tech ecosystem grow and thrive as it continues to make a meaningful impact on the global stage.

THE MARITIME AND PORT AUTHORITY OF SINGAPORE (MPA)

MR DAVID FOO

Assistant Chief Executive (Operations) / Assistant Chief Executive (Operations Technology) / Chief Data Officer
Maritime and Port Authority of Singapore (MPA)

Maritime shipping is the backbone of world trade with an estimated 80% of all goods carried by sea. Ocean-going vessels often ply routes which are beyond the reach of terrestrial or coastal sensors and communications infrastructure. As such, satellites have always been important for the maritime industry, helping to bridge between the ship and the shore.

Today, vessels rely on systems such as Global Navigation Satellite Systems (GNSS) and Global Positioning System (GPS) for positional information and transpond tracking information via the Automatic Identification System (AIS). For safety, maritime authorities use systems such as Satellite AIS, Long-Range Identification and Tracking System (LRIT) and the COSPAS-SARSAT System for tracking and managing incidents such as search and rescue. For data exchange, the International Maritime Organization (IMO), the International Organization of Marine Aids to Navigation (IALA) and MPA are exploring the use of Satellite VHF Data Exchange System (VDES) to support global e-Navigation services through international collaboration.

The rapid rise of commercial satellite capabilities will usher new opportunities to digitalise the maritime industry and enhance maritime operations. Environmental data provided by satellites, such as oceanic conditions and weather patterns, can enhance navigational safety and optimise vessels' fuel consumption. Satellite services can enable our global supply chains to become more efficient through timely and accurate voyage updates and port data exchanges between ship and shore, and just-in-time (JIT) operations will help to reduce vessels' greenhouse gas (GHG) emissions.

Maritime safety can be enhanced through satellite imagery. The availability of satellite imagery will allow maritime authorities to make better informed decisions in the detection and monitoring of incidents such as oil spills.

As satellites become more capable, there will be demand for use cases in maritime navigation, safety, and communications. MPA looks forward to partnering the Association of Aerospace Industries (Singapore) (AAIS) and like-minded partners to seize new growth opportunities in the space domain which can support key initiatives such as the Green and Digital Shipping Corridors (GDSCs).

FOREWORD

SINGAPORE
SPACE
INDUSTRY
DIRECTORY
[2025 - 2026]

“The potential for growth and innovation in Singapore’s space industry is immense. By leveraging our strengths in research and technology, and international partnerships, we are set to make our mark in the global space economy. ”

Singapore Advances its Space Aspirations

Introduction

Singapore aspires to a role in the burgeoning space economy, building upon and going beyond national needs. This ambition is evident in the 2013 establishment of the national space office, the Office for Space Technology and Industry (OSTIn), under the auspices of the Singapore Economic Development Board (EDB).

The last decade has seen rapid development in the global space economy. It was estimated to be worth US\$630 billion in 2023 and is expected to reach US\$1.8 trillion by 2035, according to the World Economic Forum. Singapore is tapping into this market opportunity, having evolved a growing and diverse ecosystem of 70 companies involved in space-related businesses, according to OSTIn.

Growing the Singapore Space Industry

This base of space businesses is expected to grow significantly. Singapore boasts the top-ranked start-up ecosystem in Asia, and many deep tech start-ups have taken advantage of this vibrant environment to raise funds, develop innovative technology solutions, and scale their operations. Start-ups specializing in data analytics, artificial intelligence, and advanced technologies continue to emerge, driven by the ecosystem's support and nurturing environment, providing a robust source of new space ventures.

Moreover, established businesses in the aerospace and electronics sectors are well-positioned to pivot and support the space economy. This presents another potential avenue for growth, as these companies can leverage their existing expertise and resources to enter the space industry. For example, the corporate members of the Association of Aerospace Industries (Singapore) (AAIS) have formed a 50-member strong Singapore Space Community to explore and realize this potential.

Singapore reached a milestone with the launch of its first locally built satellite in 2011. Since then, the country has successfully launched over 30 satellites. Local universities, including the Nanyang Technological University (NTU) and National University of Singapore (NUS) have played pivotal roles in this progress. These institutions have established centre of expertise and nurtured a growing talent base. The NTU Satellite Research Centre and NUS Satellite and Technology Research Centre collaborate closely with industry

partners, creating opportunities to test and validate technologies in space before commercialization.

OSTIn, through its Space Technology Development Programme (STDP) and other research initiatives, plays a crucial role in guiding and supporting R&D efforts in alignment with national priorities. For instance, as a major aviation and maritime hub, Singapore leverages space technology to enhance its capabilities in these sectors. Innovative solutions for navigation, communication, and environmental monitoring are being developed, including:

- Very Low Earth Orbit (VLEO) satellite technologies that would allow satellites to operate in orbits closer to earth and deliver differentiated capabilities.
- Quantum Key Distribution (QKD) satellite solutions that would enable quantum-safe transmission of secure information.
- Use of satellite data for applications such as carbon Measurement, Reporting and Verification (MRV), agriculture, pollution monitoring.

International Cooperation

Space is an international shared resource, and Singapore actively participates in various international and bilateral agreements to promote peaceful and collaborative space exploration. As a member of the United Nations Committee on the Peaceful Uses of Outer Space, Singapore upholds its commitment to the responsible use of space. The country is also a signatory to the Artemis Accords, which aim to establish a framework for international cooperation in the peaceful exploration and use of the Moon, Mars, and other celestial bodies. Additionally, Singapore is a party to the Convention on Registration of Objects Launched into Outer Space, further demonstrating its dedication to transparency and accountability in space activities.

As OSTIn's policy and regulatory roles evolve, Singapore's international treaty obligations and national interests will be integrated into relevant local space legislation. It is expected that such legislation will address various aspects of space activities, including the registration and regulation of space objects and activities, ensuring that Singapore remains compliant with its international commitments while advancing its national interests.

To foster the spirit of international cooperation, the then Singapore Space and Technology Association organized the inaugural Global

OSTIn's Executive Director Mr. Jonathan Hung briefs AAIS members

OSTIn and AAIS leadership at AAIS Annual General Meeting 2024

Space and Technology Conference (GSTC) in 2008, with support from the EDB. For 17 years, GSTC has played an important role in fostering conversations on harnessing space technologies for the betterment of society, human development, and the advancement of science in the Asia region. The conference brings together industry leaders, policymakers, and researchers to share insights, discuss challenges, and explore opportunities for collaboration. The event's latest evolution, which includes an expanded exhibition component, continues to build on this tradition, providing a platform for showcasing cutting-edge space technologies and innovations.

Singapore Space Industry Directory to Foster Business Connections

Given the vibrancy and potential of Singapore's space industry, AAIS is pleased to explore how it can contribute to the ecosystem. As an established publisher of aerospace business directories, we are proud to present the inaugural

Singapore Space Industry Directory (SSID). We envision the SSID becoming a key reference, facilitating international business collaboration with Singapore's space industry. By compiling a comprehensive listing of companies, research institutions, and key stakeholders, the SSID aims to provide a platform to facilitate connections, knowledge sharing, and partnership opportunities.

Singapore's journey in space is still in its youth, and the future looks promising. With a strong foundation of innovative start-ups

and established companies, supported by research institutions and robust international cooperation, the Singapore space industry is poised to make significant contributions to the global space economy. We eagerly anticipate the exciting developments and collaborations that will emerge from this dynamic and growing sector. The SSID further underscores Singapore's dedication to advancing its space capabilities and fostering a vibrant space ecosystem.

Conclusion

The potential for growth and innovation in Singapore's space industry is immense. By leveraging our strengths in research and technology, and international partnerships, we are set to make our mark in the global space economy. The SSID will serve as a valuable resource on this journey, connecting businesses, researchers, and policymakers to drive the next phase of space exploration and development. Together, we will reach for the stars and beyond.

Total Solution for your Aluminium Alloy Needs

SL Metals Group, a publicly listed leading aluminium distributor in Asia, boasts 40 years of industry expertise. With operations and warehouses in Singapore (HQ), China, Malaysia, and Taiwan, we are a globally trusted supplier. Being AS 9100 certified, we are dedicated to delivering high-quality products and innovative solutions to industries worldwide, such as space, aerospace, semiconductor, marine, oil and gas, and beyond. Our extensive product range, commitment to quality, and robust global supply chain empower businesses to succeed in a dynamic and evolving marketplace.

Unparalleled Stockholding

Our extensive inventory supports high-volume demands and includes a wide range of aerospace-grade aluminium plates and bars in 2, 6, and 7 series. Compliant with stringent AMS standards, our products deliver exceptional performance and reliability, positioning us as a trusted supplier for industries with rigorous quality and technical requirements.

Relationship with Reputable Principal Brands

We have built long-term relationships with reputable principal brands worldwide, creating a global network that ensures consistent quality and reliability. Our suppliers offer premium aluminium products and technical support, assisting with alloy selection and challenges. This collaboration enables tailored solutions and a reliable supply chain to meet our clients' evolving needs. Key principal brands include:

- AMAG
- Arconic
- Constellium
- Alro
- Novelis
- Kaiser

Precision Cutting Capabilities

Our cutting capabilities feature advanced CNC circular saws and bandsaws, designed to handle various thicknesses and product types. With precise tolerances, fast cutting speeds, and high capacity, our machinery ensures efficient processing and consistent quality, enabling us to meet diverse customer requirements with rapid turnaround times for different applications.

Quality

We ensure product quality with mill test certificates for all materials and full traceability through AS9100 certification. Our commitment to transparency and reliability positions us as a trusted supplier for critical and high-performance applications.

Prompt Delivery

We understand the critical timelines and challenges of aerospace production, including cyclical demands and supply chain disruptions. With a strong focus on inventory management, we maintain optimal stock levels and ensure consistent material availability, supporting seamless operations and on-time delivery to meet production requirements.

SPACE FOR GOOD

Viasat powers some of the world's most important communications solutions — on the ground, in the air, at sea, and in space. With 21 operational satellites in space, 7000+ employees, and 90 offices around the globe, we're on a mission to connect the world. Because, when everyone is connected, the possibilities are limitless.

Together with space agencies and organisations globally, we are working on solutions for secure satellite communication, that bring a safer and more resilient society.

AIRSPACE MODERNIZATION

In the world of Aviation, the Iris air traffic management program - an initiative led by the European Space Agency (ESA) and Viasat - uses Viasat satellite technology to help modernize air traffic management (ATM) by increasing the capacity of critical communications, enabling airspace optimization, easing congestion, and reducing delays and emissions for airlines.

Iris can support full 4D trajectory management over airspaces across the globe and the data link offers a modern, IP-based, complementary communication between controllers and cockpit crews. Iris connectivity can help accelerate

digitalisation of air traffic management and aviation operations.

NEW AIRSPACE USES

As airspace continues to evolve, new use cases, like that of using drones in lower airspace, and increasing use of upper airspace by high altitude pseudo satellites and rockets, will continue to develop. With breakthrough solutions being developed every year, and Viasat working with regulators to build a space for these operations in our day-to-day lives, the coming decades will be transformational.

Viasat is already supporting uncrewed aircraft to monitor remote infrastructure, capture vital climate data, carry out humanitarian relief and more. It's possible that we'll also soon be traveling through cities in autonomous flying taxis, getting our groceries delivered to our door by drones, and enjoying space tourism.

Whatever the future holds, Viasat can help connect you to the future.

Are you interested in supporting Iris in your region? Get in touch to learn more about the program's transformational benefits.

PROPEL

A Captivating Journey through Singapore's Aviation and Aerospace Legacy

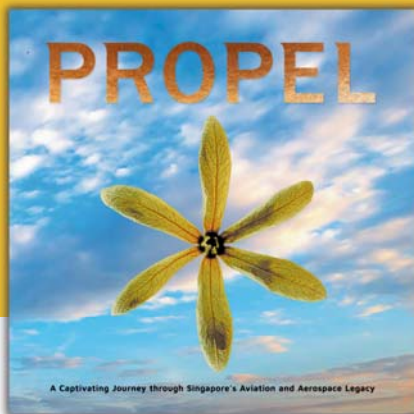

From a small seed, sprouting from the critical need to maintain a fleet of defence aircraft protecting the borders of a young nation, an entire industry has flourished.

PROPEL traces the humble origins and awe-inspiring rise of the aviation and aerospace industries. Published by the Association of Aerospace Industries (Singapore) (AAIS), this special, commemorative book was launched in conjunction with its 20th Anniversary.

Be enthralled by the history of the Singapore aviation and aerospace sectors, spanning from the inaugural airfields of the British Royal Air Force to the remarkable development of Changi Airhub. Immerse in captivating features by leading aerospace organisations in Singapore. This is a unique collection of stories that sheds light on the pivotal decisions, people and lesser-known anecdotes that have shaped the industry, painting a vibrant portrait of the aerospace sector's growth alongside the flourishing air transport industry in Singapore and beyond.

Parent Company/Headquarters:

Soon Lian Holdings Limited/ SL Metals Group

Company Profile:

Established in 1983 and listed on the SGX Catalist in 2007, SL Metals Group is a leading aluminum alloy distributor in Asia. With operations in Singapore, China, Malaysia, and Taiwan, the company serves industries including aerospace, marine, semiconductor, and precision engineering. SL Metals Group is AS 9100 certified, demonstrating a commitment to quality and reliability.

Products & Services:

SL Metals supplies a wide range of aluminum alloy products in various specifications and dimensions. Equipped with CNC plasma cutting systems, high-precision bandsaws, and custom vertical saws, we provide tailored cutting solutions. Our capabilities ensure products meet customers' exact specifications, delivering quality and precision for diverse applications.

Parent Company/Headquarters:
 Airbus

Company Profile:
 Airbus Defence and Space is a division of Airbus and a leader in the European defence and space industry. Space Systems delivers leading space technology and solutions to commercial and government customers around the world. The business unit's capabilities include telecommunication satellites for every type of mission, high-resolution Earth observation instruments, navigation satellites, unique missions in space, lunar exploration and the smooth operation of the International Space Station as well as the development of Starlab, an industry-led space station planned to succeed the ISS. From the smallest electronic components and spacecraft equipment to the delivery of satellites into orbit and the associated services – reaching for the stars is Space Systems' daily business.

Executives:

Dr Phua Poh Boon
(*Chief Technology Officer & Founder*)

Company Profile:

LightHaus Photonics, founded in 2011, is a pioneering high-tech company that transforms technologies through innovative R&D in optics/photonics, imaging, electronics, and system integration. Notably, it has developed a space camera for a Singapore consortium's remote sensing satellite, marking a significant milestone as the first local small-medium enterprise to achieve this feat.

Products & Services:

LightHaus has capabilities in the design and production of optical payloads for satellites such as high-resolution cameras, deployable optical telescopes and push broom mid-wave infrared hyperspectral cameras. It provides bespoke optical systems for clients, which include government agencies, institutions, statutory boards as well as multinational corporations.

Executives:

Mr Chan Kam Tong
(*Managing Director*)

Parent Company/Headquarters:

OPEN MIND Technologies AG

Company Profile:

A Technology Leader in the Digital Manufacturing Market, OPEN MIND designs technologically optimized CAD/CAM solutions. With our CAM software hyperMILL, we offer a wide range of outstanding 2.5D, 3D, 5-axis milling and turning strategies, as well as special applications strategies.

Products & Services:

hyperMILL allows companies to increase performance in programming and machining production. hyperMILL is a complete modular CAD/CAM solution that provides state-of-the-art CAM technologies on a dedicated CAD platform: from 2.5D-, 3D-, 5-axis and turning strategies to solutions for additive manufacturing and machining processes such as high-speed cutting (HSC) and high-performance cutting (HPC). Whether it's automation, simulation or virtual machines – pioneering technologies expand our product range and enable end-to-end digital process chains. The hyperMILL range of services is rounded off by special applications, the best possible interaction with all common CAD solutions and a customer-focused service offering.

Executives:

Dr Maverick Shih
(Chairman)
 Mr Mark Lu
(CEO)

Company Profile:

Satoro Pte Ltd is a young company, incorporated in December 2022. The company's immediate focus is on building small, agile satellites that carry customers' payloads for their missions in space. Its cutting edge lies in its ability to complete missions in a very short period of time.

Products & Services:

Satoro has a proven heritage in delivering turnkey small satellite solutions, including manufacturing, launch, and ground support services. As well as providing the IOD/IOV service to customers. Since its founding, the company has consistently launched three satellites per year, carrying various customers' payloads. In a recent project, it demonstrated the ability to complete and launch a satellite within nine months of receiving the order.

Parent Company/Headquarters:
 Thales SA
 6 rue de la Verrerie
 92190 Meudon

Company Profile:
 Thales (Euronext Paris: HO) is a global leader in advanced technologies specialising in three business domains: Defence & Security, Aeronautics & Space and Cybersecurity & Digital identity. It develops products and solutions that help make the world safer, greener and more inclusive. The Group invests close to €4 billion a year in Research & Development, particularly in key innovation areas such as AI, cybersecurity, quantum technologies, cloud technologies and 6G. Thales has close to 81,000 employees in 68 countries. In 2023, the Group generated sales of €18.4 billion.

Products & Services:
 A Joint Venture between Thales (67%) and Leonardo (33%), Thales Alenia Space (TAS) is a global space manufacturer delivering, for more than 40 years, high-tech solutions for telecommunications, navigation, Earth Observation, environmental management, exploration, science and orbital infrastructures. TAS also teams up with Telespazio to form the parent companies' Space Alliance, which offers a complete range of services. The company consolidated revenues of approximately €2.2 billion in 2023 and has around 8,600 employees in 8 countries, with 16 sites in Europe.

In Singapore, TAS acts through Thales Solutions Asia as a partner to the Singapore Space ecosystem. Through our joint lab S4TIN with NTU (Nanyang Technological University), TAS is collaborating with our partners to train talents and develop cutting edge technologies for small satellite applications. Through Space Centre of Excellence (CoE), TAS is open to new ideas and new collaborations that would put Singapore on the global Space community map.

Company Profile:

Viasat is a global satellite technology company with 90 over offices in 24 countries around the world, employing 7,000 people. Viasat's fleet of high-capacity satellites spanning Ku-, Ka-, L- and S- bands enables high-quality, reliable, secure, and affordable connections to positively impact people's lives on the ground, in the air or at sea, while building a sustainable future in space. In May 2023, Viasat completed its acquisition of Inmarsat, combining their strengths to create a global communications partner.

Products & Services:

Viasat's satellites are designed to use flexible bandwidth allocation to shift capacity to deliver a seamless connected experience to consumers, businesses, governments, and militaries across the globe. Viasat provides residential satellite internet services, safety and in-flight connectivity services for commercial air transport and business aviation, advanced air mobility, connectivity services for the maritime industry, cybersecurity solutions and AI powered insights and real-time analytics.

Parent Company/Headquarters:

Viasat Inc.
6155 El Camino Real
Carlsbad, CA 92009
USA

Company Profile:

Viasat is a global satellite technology company with 90 over offices in 24 countries around the world, employing 7,000 people. Viasat's fleet of high-capacity satellites spanning Ku-, Ka-, L- and S- bands enables high-quality, reliable, secure, and affordable connections to positively impact people's lives on the ground, in the air or at sea, while building a sustainable future in space. In May 2023, Viasat completed its acquisition of Inmarsat, combining their strengths to create a global communications partner.

Products & Services:

Viasat's satellites are designed to use flexible bandwidth allocation to shift capacity to deliver a seamless connected experience to consumers, businesses, governments, and militaries across the globe. Viasat provides residential satellite internet services, safety and in-flight connectivity services for commercial air transport and business aviation, advanced air mobility, connectivity services for the maritime industry, cybersecurity solutions and AI powered insights and real-time analytics.

Executives:

Dr Phua Poh Boon
(Chief Technology Officer & Founder)

Company Profile:

LightHaus Photonics, founded in 2011, is a pioneering high-tech company that transforms technologies through innovative R&D in optics/photonics, imaging, electronics, and system integration. Notably, it has developed a space camera for a Singapore consortium's remote sensing satellite, marking a significant milestone as the first local small-medium enterprise to achieve this feat.

Products & Services:

LightHaus has capabilities in the design and production of optical payloads for satellites such as high-resolution cameras, deployable optical telescopes and push broom mid-wave infrared hyperspectral cameras. It provides bespoke optical systems for clients, which include government agencies, institutions, statutory boards as well as multinational corporations.

(CEO)
Mr Niranjan Gundala
(VP-Business Development & Strategy)

Parent Company/Headquarters:

Zero-Error Systems Pte. Ltd./Singapore HQ

Company Profile:

Zero-Error Systems (ZES) specialises in high-reliability semiconductor solutions and intellectual properties for Space and power management applications.

Singapore-based ZES has established patented Radiation-hardened(Rad.-Hard) semiconductor integrated circuits technologies that enable low-cost commercial-off-the-shelves (COTS) semiconductor devices for Space applications by ascertaining power reliability and data integrity for COTS devices.

Products & Services:

ZES provides state-of-the-art semiconductors in Power reliability and Data integrity for Space Satellite-applications.

ZES Rad-Hardened product lineup includes: Latch-up Detection& Protection (LDAP)-IC, TMR Voter-IC, Point-of-Load(PoL) DCDC, Latch-up Current Limiter (Smart-LCL), and System-on-Modules Radiation-Tolerant solutions (ZSOM) with FPGA (Xilinx ZU3EG) and MCU (ARM Cortex M0+).

Turning risk into opportunity — that's the power of perspective

A pioneer in space and satellite insurance, Marsh provides risk management advice and customized insurance products covering launch and in-orbit risks for your space assets.

Parent Company/Headquarters:
 A*STAR Research Entities

Company Profile:

The National Additive Manufacturing Innovation Cluster (NAMIC) is a national platform hosted by A*STAR, supported by the National Research Foundation under the Prime Minister’s Office, Ministry of Trade and Industry, Enterprise Singapore and the Singapore Economic Development Board. NAMIC aims to accelerate hybrid and digital additive manufacturing (AM) technologies under Singapore’s Manufacturing and Economy 2030 Vision, aiding industries in innovation and high-value manufacturing with sustainable, nature-based designs. It focuses on value capture through industry engagement, public-private partnerships and R&D investments, supporting translational research and industry test-bedding for commercial scale-up. NAMIC is expanding its international outreach, supporting deep-tech companies using AM technologies seeking capital through joint funding or investor networks.

Products & Services:

- 1) Industry & Partnerships: Technology Offerings / Standards & Certifications
- 2) Projects: Project Curation / Grants
- 3) Services: AM Business Directory / AM Careers @ SG e-job portal
- 4) Events : Outreach / Ecosystem Building

Cut emissions without having to go near a jet engine.

Our ground-breaking Iris Air Traffic Management program with the European Space Agency is a key component of modernizing and digitalizing the aviation industry.

Iris uses secure IP connectivity to relieve pressure on congested VHF radio links, enabling the industry to unlock the benefits of 4D Trajectory-Based Operations.

Scan to discover how
you can adopt Iris
for your region.
